Art Unit: 1631

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 10-33 drawn to methods for expressing recombinant erythropoietin, classified in class 435, subclass 69.1.
- II. Claims 34-39 drawn to erythropoietin, classified in class 530, subclass 350.

The inventions are distinct, each from the other because of the following reasons. The methods of Group I do not define the polypeptides of Group II because the polypeptides of Group II may be made by other, materially different, processes (*e.g.*, by *in vitro* methods). See MPEP 806.05(f).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

To search any two groups as outlined above would create an undue burden for the U.S. PTO because the searches of the non-patent literature are not only non-overlapping to any appreciable extent, but are also divergent in nature.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
